Summary

Final-year CS (Data Science) student building ML, deep learning, and LLM/RAG systems with a focus on practical, evaluated, end-to-end solutions.

Skills

Languages:	Python, SQL
Libraries & ML:	PyTorch, OpenCV, Pandas, NumPy, Scikit-learn, XGBoost, Feature Engineering, Cross-Validation, Class Imbalance Handling, EDA, Statistical Analysis
AI / LLM:	LangChain, LangGraph, LangSmith, Retrieval-Augmented Generation (RAG), Vector Embeddings, Hugging Face
Databases:	MySQL
Visualization:	Apache Superset, Matplotlib, Streamlit
Tools:	Git, Jupyter Notebook

Projects

UPI Fraud Risk Manager 2026

Python · XGBoost · Scikit-learn · Streamlit GitHub

- Built a fraud-detection pipeline on a 6.3M-transaction PaySim dataset using 5-fold stratified cross-validation with out-of-fold threshold selection to prevent test-set leakage.
- Achieved 99.33% recall and 88.65% precision (F2: 96.99%) on a held-out test set; handled severe class imbalance via `scale_pos_weight` after diagnosing an out-of-memory failure with SMOTE.
- Added business-cost sensitivity analysis and feature/permutation importance for explainability; deployed as a Streamlit app.

RepoReader 2026

Python · LangChain · Hugging Face · Streamlit GitHub

- Built a Retrieval-Augmented Generation (RAG) tool (CLI + Streamlit) that answers natural-language questions about any GitHub repository, grounded strictly in retrieved code/docs with source attribution.
- Designed a modular pipeline (loader, chunking, embedding, retrieval, generation) with a hallucination guardrail; parsed Jupyter notebooks cell-by-cell and embedded chunks locally with Sentence-Transformers.
- Diagnosed a dense-retrieval failure mode (relevant chunk ranked #11) and validated cross-encoder reranking as a fix (#11 → #1).

Scanly — Document Scanner 2026

Python · OpenCV GitHub

- Built a CLI-based document scanning tool using classical computer vision (edge detection, perspective transform) to convert photos into straightened, enhanced scans.
- Deployed as a web app (scanly.srijan.website) using AI-assisted frontend development.
- Tested with 30 users who reviewed the project; still a work in progress, with ongoing improvements.

Experience

UI/UX Design Intern May 2025 – Aug 2025

Scorpleo Technologies

- Collaborated with engineers to design mentor and student workflow systems, translating business requirements into production-ready wireframes and product features.
- Participated in feature prioritization and usability improvements across multiple modules.

UI/UX Volunteer Jan 2026 – Jun 2026

Remineralise the Earth

- Designed an environmental awareness platform in Figma for improved navigation and accessibility.
- Worked directly with stakeholders to iterate on user-centered product decisions.

Education

Guru Gobind Singh Indraprastha University (2027) CGPA: 8.0

B.Tech in Computer Science (Data Science)

Certifications

- **NIELIT Delhi Centre — Certificate Course in Data Science using Python** (60 Hrs, Grade 'S'): Covered Python, EDA with Pandas, Matplotlib, and ML Algorithms (Regression, Classification & Clustering).
- **NPTEL (IIIT Delhi) — Human Computer Interaction** (12 weeks, Jan–Apr 2026): Elite certification with a consolidated score of 91% (assignments 24.38/25, proctored exam 66.25/75).
